Re: TSCA Section 8(e) Notice: Results from an 80 week carcinogenicity study in the mouse with [REDACTED], a substituted carboxamide

Dear Section 8(e) Coordinator:

Syngenta Crop Protection, LLC requests that the specific chemical identity and code number shown in brackets in this letter be treated as Confidential Business Information. We enclose a sanitized copy of this letter for the public file.

In accordance with EPA's March 16, 1978 policy on Section 8(e) reporting under the Toxic Substances Control Act, and EPA's June 1991 TSCA Section 8(e) Reporting Guide, Syngenta Crop Protection wishes to bring to your attention information from an 80 week carcinogenicity study in the mouse, conducted with the chemical substance [REDACTED]

[REDACTED]. This substance is known internally under the designation [REDACTED], and can be described generically as a substituted carboxamide.

Male mice were administered [REDACTED] in the feed at dose levels of 0, 75, 375 or 2250 ppm (0, 10, 50 or 300 mg/kg/day). An increase in the incidence of liver tumors (hepatocellular adenomas and carcinomas) were observed in male mice treated with ≥ 375 ppm (50 mg/kg/day) compared with the Control group.

[REDACTED] is a research and development compound being evaluated for pesticidal purposes. These evaluations are being conducted under the supervision of technically qualified personnel, knowledgeable in handling potentially hazardous chemicals.

Please contact the undersigned if you require additional information.

Sincerely,

Melvin R. Witcher, Jr., CIH
